(54) EXTENDING SUSPENSION APPARATUS OF SMALL-SIZED SNOWMOBILE

(57)Abstract:

PURPOSE: To reduce the width of the part which projects backward from a car body by prescribing the dimension of the part which supports the elongated part of an endless belt within the range of the width of the endless belt.

CONSTITUTION: When a long endless belt 3 is suspended, the dimension of the elongated suspension part which is constituted backward from a swing arm 35 is narrower than the width of the endless belt 3, so the inconvenience which is generated due to the hindrance in turning direction is obviated. Although the both ends of a suspension shaft 37 are projected from the width of the endless belt 3, for a stopper 41 is suspended between a rear bumper 42 and a suspension shaft 37, the amount of projection is small and hindrance is not formed. Thus, the width of the part projected backward from the car body can be made narrower.
